

# PYAE SONE TUN

## Software Developer

### EXPERIENCE

#### Front-end Development

- Utilized React.js to create dynamic and interactive user interfaces.
- Implemented responsive design principles for a seamless user experience across devices.

#### Back-End Development (MERN Stack)

- Built **RESTful** APIs using **Node.js** and **Express.js** to handle server-side logic.
- Implemented MongoDB for database management, ensuring efficient data storage and retrieval.

#### Collaborative Projects

- Actively collaborated with peers on coding exercises, contributing to a shared codebase and participating in code reviews.
- Developed teamwork and communication skills crucial for collaborative software development.

#### Problem Solving

- Successfully tackled complex coding challenges and problem-solving scenarios, showcasing an analytical mindset and a knack for finding effective solutions.

### About Me

Passionate web developer dedicated to creating elegant and efficient digital solutions. Specializing in front-end technologies such as React.js,

REDUX

### EDUCATION

#### Computer University

**Bachelor of Computer Science (B.C.S.C)**

### EXPERTISE

- **Front-End Development**
- **Back-End Development**
- **Responsive Design**
- **Collaboration**
- **Communication**
- **Learning and Adaptability**

### Lupyo Gyi Pyo Khin Thar (Plants-Ecommerce)

- Developed using the MERN (MongoDB, Express.js, React, Node.js) stack.
- Features(user can access favorite item, authentication, product catalog, shopping cart, order processing)
- In a landscape where Facebook pages bloom with botanical wonders, "Lupyo Gyi Pyo Khin Thar" stands out as the first of its kind, carving a niche in Myanmar's digital ecosystem. This project is not merely a platform; it's a blooming testament to the synergy between technology and nature.

### Scent-sense fragrances(Perfumes-Ecommerce)

- "Scent-Sense Fragrance" is an immersive online platform designed to revolutionize the fragrance industry by providing a personalized and seamless shopping experience. Rooted in the MERN (MongoDB, Express.js, React, Node.js) stack.
- Implement filters for different fragrance families, concentrations, and popular choices.
- Implement a seamless checkout process with multiple payment options.
- From an elaborate business plan to user-centric functionalities, it aims to redefine how users explore and purchase fragrances.

### Hot-Book (hotel booking app - react-native)

- Hot-Book is a cutting-edge React Native app designed to elevate the hotel booking process. Harnessing the power of Redux for seamless state management, Hot-Book offers a user-friendly interface and robust functionalities.
- Hot-Book leverages the power of Redux for efficient state management, ensuring a smooth and responsive user experience.

### Mobi-Shop (food-ordering app-react-native)

- Mobi Shopping, the go-to app for a delightful ecommerce food ordering experience. Crafted with user convenience in mind, Mobi Shopping blends cutting-edge technology with a passion for good food.
- Experience a curated dining adventure with personalized recommendations. Mobi Shopping learns your preferences, making each visit a tailored and enjoyable experience.
